Height: 6 feet

Spread: 5 feet

Sunlight: ○ ◐

Hardiness Zone: 4a

Other Names: Sweet Pepperbush

Description:

This highly fragrant native shrub features spikes of sweet smelling white flowers in late summer when little else is blooming; has a more compact habit of growth and good fall color; needs moist acidic soil

Ornamental Features

September Beauty Summersweet has masses of beautiful spikes of fragrant white flowers rising above the foliage from late summer to early fall, which are most effective when planted in groupings. It has green deciduous foliage. The glossy round leaves turn an outstanding harvest gold in the fall.

Landscape Attributes

September Beauty Summersweet is a multi-stemmed deciduous shrub with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees and butterflies to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Suckering

September Beauty Summersweet is recommended for the following landscape applications;

403 Green Village Road
Green Village, NJ 07935

- Mass Planting
- General Garden Use
- Naturalizing And Woodland Gardens

Planting & Growing

September Beauty Summersweet will grow to be about 6 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It is quite adaptable, prefering to grow in average to wet conditions, and will even tolerate some standing water. It is not particular as to soil type, but has a definite preference for acidic soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.
