Description:

A wonderful selection for short season growing; early maturing and high yielding, this variety produces 6" long dark purple, oval eggplants; excellent for grilling, baking, dips and eggplant parmesan; compact habit is ideal for container growing

Edible Qualities

Dusky Eggplant is an annual vegetable plant that is commonly grown for its edible qualities, although it does have ornamental merits as well. It produces deep purple oval eggplants (which are technically 'berries') with creamy white flesh which are typically harvested when mature. The eggplants have a mild taste and a firm texture.

The eggplants are most often used in the following ways:

- Eating When Cooked/Prepared
- Cooking
- Baking
- Pickling
- Sauces

Planting & Growing

Dusky Eggplant will grow to be about 24 inches tall at maturity, with a spread of 24 inches. When planted in rows, individual plants should be spaced approximately 24 inches apart. This fast-growing vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant can be integrated into a landscape or flower garden by creative gardeners, but is usually grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.

Dusky Eggplant is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
