Height: 4 feet

Spread: 18 inches

Spacing: 24 inches

Sunlight:

Hardiness Zone: (annual)

Group/Class: Cherry-Indeterminate

Description:

Vigorous and highly productive, this indeterminate cherry variety is wonderful in small gardens and patio containers; sweet, 1" round cherry red tomatoes are sweet and crisp; a perfect snacking and lunch box selection; good disease resistance

Edible Qualities

Chadwick Cherry Tomato is an annual vegetable plant that is commonly grown for its edible qualities. It produces small clusters of cherry red round tomatoes (which are technically 'berries') which are usually ready for picking from mid summer to early fall. This is a determinate variety, which means it bears a full crop all at once. The tomatoes have a sweet taste and a crisp texture.

The tomatoes are most often used in the following ways:

- Fresh Eating
- Eating When Cooked/Prepared
- Cooking
- Baking
- Canning

Planting & Growing

Chadwick Cherry Tomato will grow to be about 4 feet tall at maturity, with a spread of 18 inches. When planted in rows, individual plants should be spaced approximately 24 inches apart. This fast-growing vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant can be difficult to integrate into a landscape or flower garden, and is best grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant is a heavy feeder that requires frequent fertilizing throughout the growing season to perform at its best. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.

Chadwick Cherry Tomato is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
